Product Details

Ringlock accessories

Ringlock accessories are an important part of Ringlock scaffolding, and Ringlock scaffolding can be easily made through ringlock accessories (rosette, ledger head, diagonal head) and steel pipe. Bythai scaffolding ringlock accessories are made of Q235 or Q345 steel. And provide different shapes (Rosette) and weights in order to meet the needs of different customers. Rosette and ledger head are generally made of black parts, because galvanized welding is easy to produce toxic gas, which is very detrimental to the health of workers. On the other hand, Ringlock scaffolding generally uses hot-dipped galvanizing, welding the black rosette or ledger head and steel pipe together, and then going to hot-dip galvanizing after the production is completed, which also saves costs. The diagonal head is generally galvanized, because the process of the diagonal is to flatten the steel pipe, and then link the slash head with rivets, and there is no need to weld.

ringlock accessories are generally packed in bags and then placed in pallets, which is more suitable for shipping. The weight of the accessories is relatively large, and you can generally use a 20ft container to go for freight, which also saves sea freight.
