

Galvanized Steel Hook Scaffolding Planks Metal For Construction And Maintenance

Our Product Introduction

for more products please visit us on bythaiscaffold.com

Basic Information

- Place of Origin: China
- Brand Name: Bythai
- Certification: SGS,ISO
- Model Number: BT205
- Minimum Order Quantity: 1000
- Price: 15.5-85.5
- Packaging Details: In bundles
- Delivery Time: 10-15
- Payment Terms: container, shipping, L/C, T/T

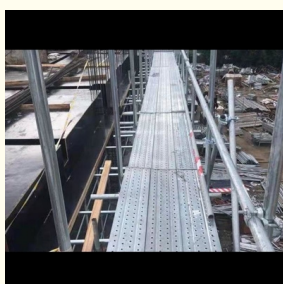

Product Specification

- Place Of Shipment: China
- Packaging: Container
- Usage: Scaffolding
- Length: Customized
- Material: Steel
- Surface: Pre-galvanized/hot Dip Galvanized/Spray Plastic
- Highlight: **Galvanized Steel Hook Scaffolding Planks, Metal Scaffolding plank, Construction Scaffolding plank**

Product Description

Product Description:

Introducing our top-of-the-range Scaffolding Plank product, meticulously crafted for the construction and building maintenance industries. This versatile steel plank is designed to integrate seamlessly with ringlock scaffolding systems, ensuring a robust, reliable platform for workers engaging in various construction activities. The product is expertly packaged in containers to guarantee safe transportation and delivery to our clients worldwide, with a primary place of shipment from China, leveraging the country's extensive manufacturing expertise and logistical infrastructure.

These steel planks are constructed with the utmost attention to quality and durability. They are essential for any scaffolding usage, providing a stable and secure work surface for construction workers at height. Our planks are engineered to support the demands of any construction site, offering a balance between strength and practicality, which ensures not only the safety of the workers but also the efficiency of the job at hand.

To cater to the unique requirements of our diverse clientele, we offer the option of customized lengths for our scaffolding planks. This degree of customization ensures that our steel planks can be tailored to fit a wide range of scaffolding configurations, making them a versatile choice for projects of any scale. Whether you require a standard size or a bespoke length, we are equipped to deliver products that meet your specific needs.

Our steel plank ringlock scaffolding products are expertly crafted with a choice of surfaces to suit different environmental and project needs. The pre-galvanized option provides a layer of protection against the elements, maintaining the integrity of the plank over time. For those in need of superior resistance against corrosion, our hot-dip galvanized steel planks are submerged in a molten zinc bath, ensuring a thick, uniform coating that significantly extends the lifespan of the product, even under harsh conditions.

For clients who prefer a more advanced protective layer, we offer steel planks with a spray plastic surface. This innovative coating not only shields the planks from rust and corrosion but also adds an extra level of durability against mechanical wear and tear. The spray plastic finish can also contribute to the aesthetic of the construction site, with the possibility of color customization according to client preferences.

The pierced steel planking we offer comes with a unique perforation pattern that provides excellent traction, reducing the risk of slips and falls on the work site. These perforations also allow for efficient drainage, ensuring the planks remain slip-resistant even in wet conditions. The intelligent design of the perforations contributes to the overall strength of the plank, while also reducing its weight, allowing for easy handling and installation.

Quality control is of the utmost importance in the manufacturing process of our galvanized steel plank products. Each plank undergoes rigorous testing to ensure it meets and exceeds industry standards for safety and performance. The strength of the steel, the integrity of the welds, and the durability of the coatings are all meticulously inspected to provide our clients with a product they can trust.

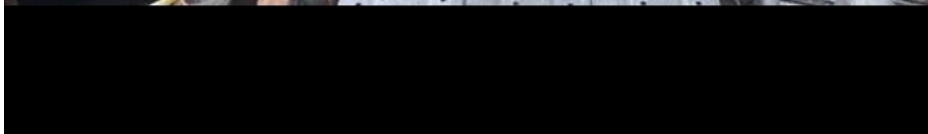

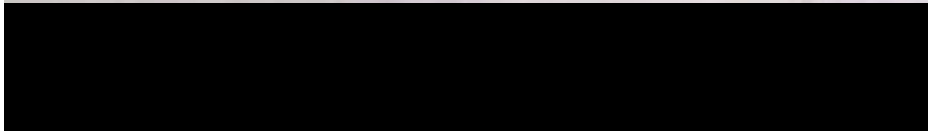

In summary, our Scaffolding Planks are a premium choice for those seeking reliable and durable solutions for their scaffolding needs.

Packaged securely in containers and shipped from China, these planks are tailored to your specifications with customized lengths and a choice of surface finishes. Whether you opt for a pre-galvanized, hot dip galvanized, or spray plastic surface, our steel planks integrate seamlessly into ringlock scaffolding systems and provide a solid footing with their pierced steel design. Invest in our Scaffolding Plank product to ensure the safety and efficiency of your construction projects.

Technical Parameters:

Attribute	Details
Usage	Scaffolding
Length	Customized
Material	Steel
Packaging	Container
Surface	Pre-galvanized/Hot Dip Galvanized/Spray Plastic
